Backend API

This page gathers all the API calls that can be used by the front end.

> Front end -> Backend

Global configuration

Collection of all functions/API calls available to the front end that handles the global variables.

saveConfigParams(configParams)

saveConfigParams(configParams)

Saves the config parameters to the persistent file

React usage example

```
import { saveConfigParams } from "./api/backend-api";

saveConfigParams(globalConfig);
```

loadConfigParams()

loadConfigParams()

Loads the config parameters from the persistent file

React usage example

```
import { loadConfigParams } from "./api/backend-api";

globalConfig = loadConfigParams();
```

Data base

Collection of all functions/API calls available to the front end that handles the communication with the data base, such as fetching and storing data.

getMaterialList()

getMaterialList()

TODO

React usage example

```
import { getMaterialList } from "./api/backend-api";

globalConfig = getMaterialList();
```

getMaterialAt(index)

getMaterialAt(index)

Returns the material at an `index` from the database.

React usage example

```
import { getMaterialAt } from "./api/backend-api";

const elem21 = getMaterialAt(21);
```

getExperimentAt(index)

getExperimentAt(index)

Returns the experiment at an `index` from the database.

React usage example

```
import { getExperimentAt } from "./api/backend-api";

const elem21 = getExperimentAt(21);
```

getDataPointArrayAt(index)

getDataPointArrayAt(index)

Returns an array of `DataPoint` at an `index` from the database.

React usage example

```
import { getDataPointArrayAt } from "./api/backend-api";
import { DataPointType } from "types/DataPointTypes";

const dataPointArrya: DataPointType[] = getDataPointArrayAt(21);
```

postMaterialJS(material)

postMaterialJS(material)

Posts a new material to the Data base

React usage example

```
import { postMaterialJS } from "./api/backend-api";

postMaterialJS({
   //...
})
```

patchMaterialByIdJS(patchMaterial)

patchMaterialByIdJS(patchMaterial)

Patches an existing material in the Data base

React usage example

```
import { patchMaterialByIdJS } from "./api/backend-api";

patchMaterialByIdJS({
   id: 2,
   supplier_name: "Meu novo fornecedor",
   supplier_contact_info: "(12) 9 9123-0192",
   extra_info: "Hehe muito legal",
})
```

deleteMaterialByIdJS(id)

deleteMaterialByIdJS(id)

Deletes an existing material in the Data base.

React usage example

```
import { deleteMaterialByIdJS } from "./api/backend-api";

deleteMaterialByIdJS(22)
```

postExperimentJS(experiment)

postExperimentJS(experiment)

Posts a new experiment to the Data base

React usage example

```
import { postExperimentJS } from "./api/backend-api";

postExperimentJS({
   // ...
})
```

patchExperimentByIdJS(patchExperiment)

patchExperimentByIdJS(patchExperiment)

Patches an existing experiment in the Data base

React usage example

```
import { patchExperimentByIdJS } from "./api/backend-api";

patchExperimentByIdJS({
   id: 2,
   name: "Meu novo nome",
   extra_info: "Hehe muito legal",
})
```

deleteExperimentByIdJS(id)

deleteExperimentByIdJS(id)

Deletes an existing experiment in the Data base.

React usage example

```
import { deleteExperimentByIdJS } from "./api/backend-api";

deleteExperimentByIdJS(22)
```

Core

checkCanStartExperimentJS()

checkCanStartExperimentJS()

This function calls the `check_can_start_experiment(experiment_id)` on the backend.

The front end will call this function when the user click to start experiment.

The backend **MUST** respond with a 1 if everything is ok or 0 if something is not correct.

In case something is wrong the backend also displays an error to the user telling what went wrong

React usage example

```
import { checkCanStartExperimentJS } from "./api/backend-api";

onClick(()=>{
   checkCanStartExperimentJS(2);
};)
```

startExperimentRoutineJS(experimentId)

startExperimentRoutineJS(experimentId)

This function calls the `start_experiment_routine(experiment_id)` on the backend.

The front end will call this function after everything is correct and ready to change pages.

Receives an `id` to an experiment as parameter.

The backend **MUST** send a command to change to the experiment page.

Returns 1 if succeeded.

React usage example

```
import { startExperimentRoutineJS } from "./api/backend-api";

onClick(()=>{
   startExperimentRoutineJS(2);
};)
```

endExperimentRoutineJS()

endExperimentRoutineJS()

This function calls the `end_experiment_routine()` on the backend.

Usually it should be used to handle when the user press a "end experiment" button or something similar.

React usage example

```
import { getMaterialList } from "./api/backend-api";

onClick(()=>{
   endExperimentRoutineJS();
};)
```

setCustomMovementDistanceJS()

setCustomMovementDistanceJS()

Warning

DEPRECATED

This function calls the `set_custom_movement_distance(new_movement_distance)` on the backend.

Sets the movement distance that the z-axis moves when the user is controlling the machine manually.

This distance is set in MILLIMETERS

Returns 1 if succeeded.

React usage example

```
import { setCustomMovementDistanceJS } from "./api/backend-api";

onClick(()=>{
   // Sets the movement distance to 50 mm
   setCustomMovementDistanceJS(50);
};)
```

returnZAxisJS()

returnZAxisJS()

This function calls the `return_z_axis()` on the backend.

Returns the z-axis to the origin.

Returns 1 if succeeded (if the function was acknowledged).

React usage example

```
import { returnZAxisJS } from "./api/backend-api";

onClick(()=>{
   returnZAxisJS();
};)
```

stopZAxisJS()

stopZAxisJS()

This function calls the `stop_z_axis()` on the backend. Stops the z-axis. Returns 1 if succeeded (if the function was acknowledged).

React usage example

```
import { stopZAxisJS } from "./api/backend-api";

onClick(()=>{
   stopZAxisJS();
};)
```

moveZAxisMillimetersJS(distance)

moveZAxisMillimetersJS(distance)

This function calls the `move_z_axis_millimeters(distance)` on the backend. Moves the z-axis [distance]mm. This distance is set in MILLIMETERS Returns 1 if succeeded (if the function was acknowledged).

React usage example

```
import { moveZAxisMillimetersJS } from "./api/backend-api";

onClick(()=>{
   moveZAxisMillimetersJS(10);
};)
```

getAvailablePortsListJS()

getAvailablePortsListJS()

This function calls the `get_available_ports_list()` on the backend. Returns a JSON object containing the available COM ports:

JSON

```
{
   "port": x,
   "desc": y,
}
```

React usage example

```
import { getAvailablePortsListJS } from "./api/backend-api";

onClick(()=>{
   getAvailablePortsListJS().then((availablePorts)=>{
      if(availablePorts) console.log(availablePorts);
   });
};)
```

connectToPortJS()

connectToPortJS()

This function calls the `connect_to_port()` on the backend. Connects to a port. The port argument is a string like `COM4`

Returns 1 connection was successful

React usage example

```
import { connectToPortJS } from "./api/backend-api";

onClick(()=>{
   connectToPortJS("COM3");
};)
```

disconnectGranuladoJS()

!!! quote "### disconnectGranuladoJS() ()" This function calls the `disconnect_granulado()` on the backend.

Text Only

Returns 1 connection was successful

```` javaScript title="React usage example"
import { disconnectGranuladoJS } from "./api/backend-api";

onClick(()=>{
    disconnectGranuladoJS("COM3");
};)
```

## tareLoadJS()

### tareLoadJS()

This function calls the `tare_load()` on the backend. Tares the load cell Returns 1 if succeeded (if the function was acknowledged).

**React usage example**

```
import { tareLoadJS } from "./api/backend-api";

onClick(()=>{
    tareLoadJS();
};)
```

## calibrateKnownWeightJS()

### calibrateKnownWeightJS()

This function calls the `calibrate_known_weight()` on the backend. Calibrates the load cell to the known weight Returns 1 if succeeded (if the function was acknowledged).

**React usage example**

```
import { calibrateKnownWeightJS } from "./api/backend-api";

onClick(()=>{
    calibrateKnownWeightJS();
};)
```

## calibrateZAxisJS()

### calibrateZAxisJS()

This function calls the `calibrate_z_axis()` on the backend. Calibrates z axis of the machine Returns 1 if succeeded (if the function was acknowledged).

**React usage example**

```
import { calibrateZAxisJS } from "./api/backend-api";

onClick(()=>{
   calibrateZAxisJS();
};)
```

## getGranuladoIsConnectedJS()

### getGranuladoIsConnectedJS()

This function calls the `get_granulado_is_connected()` on the backend. Checks if granulado is connected

Returns a `boolean`

**React usage example**

```
import { getGranuladoIsConnectedJS } from "./api/backend-api";

onClick(()=>{
   alert(getGranuladoIsConnectedJS());
};)
```
