API

In this section you will be able to finde every API call available.

These calls are exposed to the **front-end** via the eel object, giving it access to the **data base**, **systems** and **hardware**. This solutions makes use of the eel library to realize the communication between the front-end and back-end:

This API reference will show the methods being called by the front-end in JavaScript, and every call should be made **asynchronously**.

How to create and expose functions to the backend

```
function myJsFunction(message) {
    console.log(`Got this from the back end ${message}`)
}

// This line exposes the function to the back end, note the second argument, it is the name that the back end needs to call
    window.eel.expose(myJsFunction, "myJsFunction");
```

```
try:
    eel.myJsFunction("IT'S WORKING")
except:
    pass
```
