# Front end API

This page gathers all the API calls that can be used by the backend.

Backend -> Front end

> **Warning**
>
> The functions can only be called if they are available on the `web/build` directory, therefore if you make a change using `npm run serve` won't show it, you will need to rebuild the front end with `npm run buildWeb` or by using `npm run start`.

> **Note**
>
> These functions can only be called after eel is initiated with `eel.init()`.

## Core API

Collection of all functions/API calls available to the backend. You can find them in the `bolinho_api/core.py` file.

The JavaScript file can be found in the api folder.

# ping()

## ■ **ping()**

Tries to ping the bolinho front-end, returns 1 if it worked

**Python usage example**

```python
from bolinho_api.core import core_api

while True:
    try:
        if core_api.ping():
            print("got a ping!")
            break
        pass
    except:
        eel.sleep(1)
```

# get_config_params()

## ■ **get_config_params()**

Tries to ping the bolinho front-end, returns 1 if it worked

**Python usage example**

```python
from bolinho_api.core import core_api

config = core_api.get_config_params()
current_save_version = config["configVersion"]
print(current_save_version)
```

This function is located at `src/web/src/App.js`

## go_to_experiment_page()

go_to_experiment_page()

Asks the front end to go to the experiment page.

Returns 1 if succeeded.

**Python usage example**

```python
from bolinho_api.core import core_api

change_pages = True
if change_pages:
    core_api.go_to_experiment_page()
```

## go_to_home_page()

go_to_home_page()

Asks the front end to go to the home page.

Returns 1 if succeeded.

**Python usage example**

```python
from bolinho_api.core import core_api

change_pages = True
if change_pages:
    core_api.go_to_home_page()
```

## set_is_connected()

set_is_connected()

Sets the variable "isConnected" on the front-end.

**Python usage example**

```python
from bolinho_api.core import core_api

core_api.set_is_connected(True)
```

## refresh_data()

> ### refresh_data()
>
> Sets the variable "isConnected" on the front-end.
>
> **Python usage example**
> ```python
> from bolinho_api.core import core_api
>
> add_material_to_db() #Arbitrary function that adds a material to the DB
>
> core_api.refresh_data()
> ```

# UI API

Collection of all functions/API calls available to the backend for UI in general. You can find them in the `bolinho_api/ui.py` file.

The JavaScript file can be found in the api folder.

## success_alert(text)

> ### success_alert(text)
>
> Uses React-Toastify to create an success alert.
>
> **Python usage example**
> ```python
> from bolinho_api.ui import ui_api
>
> ui_api.success_alert("Success!")
> ```

# error_alert(text)

### ◻ error_alert(text)

Uses React-Toastify to create an error alert.

**Python usage example**

```python
from bolinho_api.ui import ui_api

ui_api.error_alert("Error!")
```

# prompt_user(description, options, callback_func)

### ◻ prompt_user(description, options, callback_func)

Prompts the user with a 'description', and shows the 'options' to the user.

The result is passed to the callback_function

**Python usage example**

```python
from bolinho_api.ui import ui_api

def get_result(result):
    if result == "yes":
        print("The user chose yes")
    print("The user chose no")

ui_api.prompt_user(
    description="Do you want to pay 1000?",
    options=["yes", "no"],
    callback_func= get_result,
    )
```

## set_focus(focus_element: str)

> ### ▩ error_alert(focus_element: str)
>
> Focus in an specific element on the frontend.
>
> WARNING Pay attention to the name of the element you are trying to focus
>
> You can find them at https://github.com/HefestusTec/bolinho/blob/main/src/web/src/api/apiTypes.ts
>
> **Python usage example**
> ```python
> from bolinho_api.ui import ui_api
>
> ui_api.set_focus("connection-component")
> ```

# Experiment page API

Collection of all functions/API calls available to the backend for the **experiment** routine. You can find them in the `bolinho_api/experiment.py` file.

The JavaScript file can be found at `web/src/api/contexts/ExperimentPageContext.tsx` .

## get_load_percentage()

> ### ▩ get_load_percentage()
>
> Asks the front for the current load percentage.
>
> This variable is shown to the user in a progress bar. And is usually between 0-100.
>
> Returns the load percentage value
>
> **Python usage example**
> ```python
> from bolinho_api.experiment import experiment_api
>
> print(experiment_api.get_load_percentage())
> ```

# set_load_percentage(newValue)

## ▢ set_load_percentage(newValue)

Sets the current load percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

for number in range(100):
    experiment_api.set_load_percentage(number)
    eel.sleep(0.1)
```

# get_time_percentage()

## ▢ get_time_percentage()

Asks the front for the current time percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

Returns the load percentage value

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

print(experiment_api.get_time_percentage())
```

## set_time_percentage(newValue)

### set_time_percentage(newValue)

Sets the current time percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

experiment_api.set_time_percentage(22)
```

## get_distance_percentage()

### get_distance_percentage()

Asks the front for the current distance percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

Returns the load percentage value

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

print(experiment_api.get_distance_percentage())
```

## set_distance_percentage(newValue)

### set_distance_percentage(newValue)

Sets the current distance percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

experiment_api.set_distance_percentage(22)
```

# get_delta_load_percentage()

## ▨ get_delta_load_percentage()

Asks the front for the current delta load percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

Returns the load percentage value

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

print(experiment_api.get_delta_load_percentage())
```

# set_delta_load_percentage(newValue)

## ▨ set_delta_load_percentage(newValue)

Sets the current delta load percentage.

This variable is shown to the user in a progress bar. And is usually between 0-100.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

experiment_api.set_delta_load_percentage(22)
```

# get_experiment_parameters()

### get_experiment_parameters()

Asks the front for the current experiment parameters.

Returns a formatted string

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

print(experiment_api.get_experiment_parameters())
```

# set_experiment_parameters(newValue)

### set_experiment_parameters(newValue)

Sets the current experiment parameters.

Receives a formatted string.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

experiment_api.set_experiment_parameters("Experiment 202 <br/> Load cell: lxi92")
```

# get_readings()

### get_readings()

Asks the front for the current Readings.

Returns an object of type Readings, this object gathers all the current readings of the machine. Such as Current z axis position, current load, and status

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

reading_obj = experiment_api.get_readings()

print(reading_obj.status)
```

# set_readings(newValue)

## ▇ **set_readings(newValue)**

Sets the current Readings.

Receives an object of type Readings, this object gathers all the current readings of the machine. Such as Current z axis position, current load, and status.

This function dumps the object to a JSON and sends it to the front end

### Python usage example

```python
from bolinho_api.experiment import experiment_api
from bolinho_api.classes import import Readings

new_machine_readings = Readings(299, 87, 300, "not good")

experiment_api.set_readings(new_machine_readings)
```

# get_description()

## ▇ **get_description()**

Asks the front for the current description.

Returns a formatted string

### Python usage example

```python
from bolinho_api.experiment import experiment_api

print(experiment_api.get_description())
```

# set_description(newValue)

## ■ **set_description(newValue)**

Sets the current description.

Receives a formatted string.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

experiment_api.set_description("New Experiment description")
```

# get_material()

## ■ **get_material()**

Asks the front for the current Material.

Returns an object of type Material.

**Python usage example**

```python
from bolinho_api.experiment import experiment_api

material_obj = experiment_api.get_material()

print(material_obj.name)
```

# set_material(newValue)

## ◼ set_material(newValue)

Sets the current Material.

Receives an object of type Material

This function dumps the object to a JSON and sends it to the front end

**Python usage example**

```python
from bolinho_api.experiment import experiment_api
from bolinho_api.classes import Material

current_material = Material(
    id=23,
    name="aço 22",
    batch="1",
    experimentArray=[1, 3, 2],
    supplier="Metalúrgica JOSÉ",
    extraInfo="Cilindro",
)

experiment_api.set_material(current_material)
```
